

MAIN TOPICS AND PROCEDURES

1. Upper digestive tract:

- Hemostasis for GI bleeding (injections, thermal, clips)
- Band ligation of esophageal varices
- Histoacryl treatment of gastric varices
- Watermelon stomach treatment (APC/ligation)
- Different endoscopic management of Barrett dysplasia (mucosectomy/RFA)
- Dilatation of esophageal strictures
- Endoscopic stenting of esophageal strictures (metalstent/biodegradable stent)
- Sessile gastric polyp/submucosal tumor EUS
- Duodenal stenting
- Different endoscopic treatment modalities of obesity
- Various treatment options for achalasia
- Endoscopic treatment of Zenker diverticula
- Enteroscopy/capsule endoscopy

2. Biliopancreatic diseases:

- Therapeutic ERCP
- Cannulation/Sphincterotomy/Stents in benign/malignant diseases
- ERCP in patients with altered anatomy
- Periapillary polyp – ampullectomy
- Cystenterostomy

3. Lower digestive tract:

- Screening colonoscopy
- Ulcerative colitis NBI surveillance
- Polypectomy (pedunculated/sessile/laterally spreading)
- Mucosectomy/EMR/ESD
- Dilatation/stenting of strictures
